Automatic technical analysis. Medium term, Feb 18, 2020

OMX Stockholm PI shows strong development within a rising trend channel in the medium long term. Rising trends indicate that the market experiences positive development and that buy interest among investors is increasing. The price has risen strongly since the positive signal from rectangle formation at the break through the resistance at 626. The objective at 682 is now met, but the formation still gives a signal in the same direction. There is no resistance in the price chart and further rise is indicated. In case of a negative reaction, the index has support at approximately 627 points. RSI diverges negatively against the price, which indicates a danger for a reaction down. The RSI curve shows a falling trend, which is an early signal for a possible trend reversal downwards for the price as well. The index is overall assessed as technically positive for the medium long term.

Recommendation one to six months: Positive (Score: 95)

Period	Vol.bal.	Volatility	Liquidity	+/- %
1 day	-	0.65%	4 642.15	-0.74%

Learn more about key technical aspects of this stock:

Trend

Rising trend

Rising trends indicate that the company experiences positive development and increasing buy interest among investors.

Support and resistance

Price above support

The price is above a support level, where the stock has previously turned upwards. Many investors may consider it cheap if it falls towards support again, and may then wish to buy.

Price formation

Buy signal from rectangle formation

A buy signal from a rectangle formation signals increasing optimism among investors and signals that the stock continues or enters a rising trend.
