## Automatic technical analysis. Medium term, Jan 27, 2020 ?

SimCorp is in a rising trend channel in the medium long term. This shows that investors over time have bought the stock at higher prices and indicates good development for the company. There is no resistance in the price chart and further rise is indicated. In case of a negative reaction, the stock has support at approximately 640 kroner. The stock is assessed as technically positive for the medium long term.

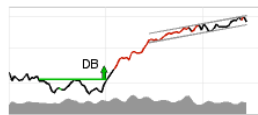

Recommendation one to six months: **Positive (Score: 86)**

Period <span>?</span>	Vol.bal.	Volatility	Liquidity	+/- %

**Learn more about key technical aspects of this stock:**

*Trend*

**Rising trend**

Rising trends indicate that the company experiences positive development and increasing buy interest among investors.

*Support and resistance*

**Price above support**

The price is above a support level, where the stock has previously turned upwards. Many investors may consider it cheap if it falls towards support again, and may then wish to buy.
